FEATURES

- Up to 100 Fingerprints can be registered
- Guest Pin Number Registration (One-Time Password)
- Auto, Manual Locking / Double Locking Mode
- Random Number and Multi-touch features
- Administrator Setting Menu

Price :- 20000/-

Door Lock System

Fingerprint Based Wired System :-

Today, biometric security devices do much more than authentication: they also provide the right level of security, at the exact places needed, and are able to adjust dynamically the level of authentication necessary for ever-changing threat levels. These capabilities only increase in importance as modern physical access control systems also begin to converge with other building management and communication devices. To manage employees, visitors, and contractors better, and protect important areas -- executive floors, data centers, and research labs -- more companies are deploying physical security systems, video surveillance cameras, and time and attendance systems.

Type	Specification
